INTERESTS **Autonomous Driving, Robotics, Deep Learning and Reinforcement Learning**

EDUCATION **University of Electronic Science and Technology of China (UESTC)**, Chengdu, China
 B.Eng., Automation **Sep. 2008 to June 2012**

EXPERIENCE **Dorabot Inc.**, Shenzhen, China

Robotics Engineer/Researcher

Sep. 2016 to Present

- Refined the proposed multi-agent navigation solution via deep reinforcement learning, and evaluated it in a set of simulated and real scenarios with 180 degree 2D laser scanners [1].
- Deployed the solution on the real non-holonomic multi-robot systems.

Robotics Engineer Intern

Jan. 2016 to Mar. 2016

- Developed a robotic system that is capable of both picking and placing general objects in warehouse scenarios [3].
- Performed a survey on multi-agent navigation (collision avoidance).

City University of Hong Kong, Hong Kong, China

Research Assistant

Mar. 2016 to Sep. 2016

- **Supervisor:** Prof. Jia Pan
- Designed a novel end-to-end framework to generate reactive collision avoidance policy for fully distributed non-communicating multi-agent navigation [2].

Shenzhen Institutes of Advanced Technology (SIAT), Chinese Academy of Sciences (CAS), Shenzhen, China

Research Assistant, Visual Computing Research Center

Oct. 2012 to Nov. 2015

- **Supervisors:** Prof. Hui Huang, Prof. Kevin Xu, and Prof. Baoquan Chen
- Employed a data-driven approach to modeling contextual information covering both intra-object part relations and inter-object layouts for scene understanding [4].
- Participated in the **Amazon Picking Challenge 2015** along with other teammates from Dorabot Inc and Hong Kong University. I mainly worked on several components of the challenge: creating the robot URDF file, motion planning, grasping, and the overall framework [3].
- Developed an autonomous scene scanning system with the PR2 robot and proposed an approach for object-level scene reconstruction coupled with object-centric scene analysis [5].
- Participated in presenting an intrusive acquisition solution for scanning and modelling of plants and foliage [6].
- Participated in designing a quality-driven, Poisson-guided autonomous object scanning method and implemented the proposed system on the PR2 robot [7].

University of Electronic Science and Technology of China, Chengdu, China

Undergraduate Researcher, Machine Intelligence Institute

Sep. 2010 to June 2012

- **Supervisor:** Prof. Hong Cheng
- Developed an approach for recognizing the everyday indoor objects and measuring their real size with an RGB-D camera.
- Built an indoor mobile robot and performed map building, autonomous navigation and people following with the robot.
- Designed 3 quadruped robots from scratch and implemented discrete reaching movement and rhythmic movements (four different gaits) on them by using Central Pattern Generator-based locomotion control methods.

AWARDS & HONORS	• SIAT Innovation Program for Excellent Young Researchers 2015
	• Outstanding Bachelor Thesis (Grade: 95/100), UESTC 2012
	• As the sole representative of UESTC to participate in the 4th Chinese University Students' Creativity Forum. 2011
	• The Top 1 Project of Creative Experimental Project of National Undergraduate Students in UESTC, 1 out of 197, Team Leader 2011
	• Outstanding students in National Graduates Summer School on Intelligent Robotics 2010
	• Several Scholarships in UESTC 2009 - 2011
SKILLS	Software/Libraries TensorFlow, PyTorch, Keras, MxNet, ROS, PCL, OpenCV, MoveIt!
	Programming Languages Python, C/C++, L ^A T _E X, MATLAB
	Operating Systems Linux, Windows
	Robots (I worked with) PR2 (Willow Garage), UR5 (Universal Robots), Turtlebot, Multiple Mobile Robots, Self-made Quadruped Robots
